

Flossbach von Storch - Global Convertible Bond - R

INVESTMENT STRATEGY

The Flossbach von Storch - Global Convertible Bond represents a defensive alternative to pure equity investments. The convex profile of convertible bonds enables investors to profit from rising prices on the equity market while at the same time limiting price risks. Security selection is based on a fundamental analysis process using in-house valuation models. If no convertible bond is available for an underlying security that appears attractive, or if its structure does not match the desired profile, the fund management can combine bond and call option to present a similarly attractive structure. Other in-house valuation models include ESG questions, and engagement. In addition, exclusion criteria defined as part of the Sub-Fund's investment policy are taken into account. Foreign currency risks are currently largely hedged. The fund invests globally in convertible bonds. The Sub-Fund is actively managed. The portfolio is composed by the fund manager exclusively in accordance with the criteria defined in the investment policy, reviewed regularly and adjusted if necessary. The performance of the Sub-Fund is compared using the UBS Thomson Reuters Global Focus Hedged Convertible Bond Index as a benchmark. The investment manager is not linked to the Index at any time when making investment decision and the portfolio composition. Therefore, the performance of the Sub-Fund may differ significantly from the reported benchmark. The Sub-Fund is categorized as an Article 8 product under the Disclosure Regulation (EU) 2019/2088 (SFDR). For detailed information on the objectives and investment policy, please refer to the most recent sales prospectus and the Key Information Document (PRIIP-KID).

EXPLANATORY NOTES REGARDING PERFORMANCE

Gross fund performance (BVI method) takes into account all costs incurred at fund level (for example, management fees), net fund performance also takes into account the subscription fee. Further costs may be charged individually at customer level (e.g. custody fees, commissions and other charges). Example calculation (net method): An investor wishes to buy shares with capital of €1,000. Based on a maximum subscription fee of 5 %, € 50 will be deducted from their investment as a one-off initial charge. In addition, custody fees may also be applied, which will further reduce the investor's return. The level of custody fees can be found in your bank's schedule of fees and services. Please refer to the cost details presented in this document to determine the maximum subscription fee for the share class of the sub-fund. The reference index is merely informative. It does not constitute any obligation from the fund manager to track the index or achieve the same performance. Past performance is not a reliable indicator of future performance.

MONTHLY COMMENTARY

Amid an eventful start to the year, the positive mood on global equity markets largely persisted. The emerging market rally in particular gained momentum in view of the pronounced weakness of the dollar, strong capital inflows and rising commodity prices. The MSCI Emerging Markets Index recorded a gain of around 11% in January, driven in particular by the Korean equity market, which rose by an impressive 24% over the same period. The Hang Seng Index in China also performed above average, gaining 7%. In the USA, Donald Trump's declaration of intent to annex Greenland, together with interim tariff threats against some EU countries, caused turmoil on the markets. He then relativised these statements during talks at the World Economic Forum in Davos. All in all, US equity markets also got off to a good start, with small caps (Russell 2000 Index) in particular finding new momentum and performing well above average, gaining 5.4%. This development reflected a market rotation away from highly valued mega caps towards more cyclical, interest-rate-sensitive companies, driven by falling real interest rates and improved economic expectations. For example, the Magnificent Seven performed slightly negatively on a month-on-month basis. Global bond markets also had a turbulent start to the new year. Geopolitical tensions surrounding Greenland initially boosted prices of short- and medium-term euro bonds, before yields rose again after Trump backtracked in Davos. In the second half of the month, the focus shifted primarily to Japan. The volatility surrounding Prime Minister Takaichi's announcement of new elections, with which she hopes to improve the majority for her expansionary fiscal policy, weighed on the markets. The yield curves in the USA and the eurozone were also unable to escape the at times erratic rise in yields on long-term Japanese government bonds. In conjunction with resilient leading indicators for the US economy, interest rates rose across the entire yield curve over the month. In contrast, yields in the eurozone remained stable and even fell slightly at the short end, as investors sought German Bunds as a 'safe haven' in view of the geopolitical volatility. While the narrative of 'higher for longer' dominated in the USA, hopes for easing remained in Europe as economic growth remained weaker. This transatlantic divergence led to a marked divergence in yield curves and a temporarily significantly stronger euro above USD 1.20. At the end of the month, the Federal Reserve met and left its key interest rate unchanged at 3.50%–3.75%. After three cuts at the end of 2025, this pause marked a temporary halt to the easing cycle. Most recently, US President Donald Trump's nomination of Kevin Warsh as the future Fed Chair took centre stage, causing the US dollar to strengthen and gold and silver to sell off heavily in the last few trading days of the month. Convertible bonds benefited from small-cap and Asian strength and got off to a positive start to the year. The Fund's share price rose by 1.6% in January. The delta rose slightly compared to the previous month to 40%.

Flossbach von Storch - Global Convertible Bond - R

OPPORTUNITIES

- + Investing in funds can deliver an attractive result at a lower level of risk compared to a direct investment in equities.
- + Income can be generated from regular interest payments.
- + Convertible bonds can increase in value when equity markets rise.
- + Derivatives can be used to increase potential yields.
- + Investing in assets denominated in a foreign currency can have a positive impact on unit values as a result of exchange rate movements.

RISKS

- Investing in convertible bonds may entail price risks, especially in the case of rising interest rates on the capital markets.
- Convertible bonds can decline in value when equity markets fall.
- Country, credit and issuer liquidity risk. Also potential exchange rate risks. If securities are illiquid (i.e. thinly traded), there is a risk that it may either not be possible to sell the assets at all or only by accepting a significant discount on the sale price. ESG criteria can restrict the selection of target investments in terms of category and number, sometimes considerably.
- Where used, derivatives can have a greater negative impact on the fund value than would be the case if the assets were acquired directly. This can affect the fund's risk profile and volatility (tendency for the price to fluctuate).
- The straight concentration on special markets can have a negative impact because of the dependent performance of these selected markets.
- Investing in assets denominated in a foreign currency can have a negative impact on unit values as a result of exchange rate movements.

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

GROWTH-ORIENTED:

The fund is appropriate for growth-oriented investors. Due to the composition of the net subfund assets, there is a high degree of risk but also a high degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZON:

Long-term: \geq 5 years

RISK INDICATOR

The risk indicator assumes you keep the product for 5 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact our capacity to pay you. Unusual market conditions could arise, for example, due to currency, creditworthiness, price, counterparty, liquidity and interest rate risks, as detailed in the sales prospectus.
