Flossbach von Storch

Flossbach von Storch - Bond Opportunities - USD-HT⁴

CATEGORY: BONDS AND CONVERTIBLES
Data as per 31 January 2026

INVESTMENT STRATEGY

Flossbach von Storch - Bond Opportunities is a globally diversified bond fund with an active investment approach that focuses on corporate bonds, government bonds and covered bonds. The Fund flexibly exploits the opportunities of the entire bond market. In addition to bonds with an investment-grade quality, the fund management can also invest in bonds without a rating or in those that do not have investment-grade quality. Foreign currency risks are currently only entered into to a manageable extent. Security selection is based on a fundamental analysis process. The fund manager relies on research tools developed in-house. Other in-house valuation models include ESG questions, and engagement. In addition, exclusion criteria defined as part of the Sub-Fund's investment policy are taken into account. The share class is hedged against currency fluctuations affecting the Sub-Fund currency.

The Sub-Fund is actively managed and not benchmarked against an index. The portfolio is composed by the fund manager exclusively in accordance with the criteria defined in the investment policy, reviewed regularly and adjusted if necessary. The Sub-Fund is categorized as an Article 8 product within the meaning of the Disclosure Regulation (EU) 2019/2088 (SFDR).

For detailed information on the objectives and investement policy, please refer to the most recent sales prospectus and the Key Information Document (PRIIP-KID).

EXPLANATORY NOTES REGARDING PERFORMANCE

Gross fund performance (BVI method) takes into account all costs incurred at fund level (for example, management fees), net fund performance also takes into account the subscription fee. Further costs may be charged individually at customer level (e.g. custody fees, commissions and other charges). Example calculation (net method): An investor wishes to buy shares with capital of €1,000. Based on a maximum subscription fee of 5 %, € 50 will be deducted from their investment as a one-off initial charge. In addition, custody fees may also be applied, which will further reduce the investor's return. The level of custody fees can be found in your bank's schedule of fees and services. **Please refer to the cost details presented in this document to determine the maximum subscription fee for the share class of the sub-fund.** The reference index is merely informative. It does not constitute any obligation from the fund manager to track the index or achieve the same performance. **Past performance is not a reliable indicator of future performance.**

MONTHLY COMMENTARY

At the start of the month, tariff announcements by US President Donald Trump amid tensions over Greenland initially boosted prices of euro bonds with short and medium maturities – before talks on the sidelines of the World Economic Forum eased tensions and led to higher yields again. In the second half of the month, attention focused primarily on the prospect of significant fiscal stimulus in Japan (in the wake of the announcement of new elections) and the nomination of Kevin Warsh as Fed Chair successor by US President Donald Trump. Both factors caused a slight steepening of the euro yield curve. Overall, two-year German Bunds were around three basis points (bps) lower month-on-month, while 30-year maturities were around two bps higher. In terms of spread products, covered bonds continued to outperform German Bunds, as did Italian and French government bonds, with the latter benefiting from a short-term agreement on the 2026 budget, despite ongoing fiscal challenges. Despite the geopolitical uncertainties described above, corporate bonds continue to trade at historically expensive levels across the board. The Fund recorded a positive return at the start of the year despite the volatile market environment. We selectively participated in new issues of high-quality corporate bonds with various maturities and covered bonds, thereby reducing cash holdings. At fund level, the duration increased slightly again compared with the previous month due to the reduction in cash holdings in favour of seasonal new issues – we continue to consider duration to be the better-paid risk than corporate bonds with weak credit ratings.

Flossbach von Storch - Bond Opportunities - USD-HT

OPPORTUNITIES

+ Participate in global bond market growth.
+ Income can be generated from regular interest payments.
+ Active interest rate, currency and risk management (e.g. from the use of derivatives).

RISKS

- Country, credit and issuer liquidity risk. Also potential exchange rate risks. If securities are illiquid (i.e. thinly traded), there is a risk that it may either not be possible to sell the assets at all or only by accepting a significant discount on the sale price. ESG criteria can restrict the selection of target investments in terms of category and number, sometimes considerably.
- Investing in bonds may entail price risks, especially in case of rising interest rates on the capital markets.
- Where used, derivatives can have a greater negative impact on the fund value than would be the case if the assets were acquired directly. This can affect the fund's risk profile and volatility (tendency for the price to fluctuate).

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

CONSERVATIVE:

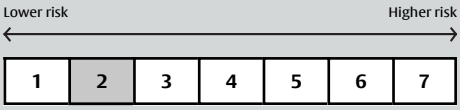
The fund is appropriate for conservative investors. Due to the composition of the net sub-fund assets, there is a moderate degree of risk but also a moderate degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZON:

Medium-term: 3 to 5 years

RISK INDICATOR

Lower risk — Higher risk



The risk indicator assumes you keep the product for 3 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact our capacity to pay you. Unusual market conditions could arise, for example, due to currency, creditworthiness, price, counterparty, liquidity and interest rate risks, as detailed in the sales prospectus.
